

Examination for First Class Boat's Operator

Advanced Part
(Qs51 through 64)

Test	E
------	---

Examinee's Number	R2 (2020) 60/64
----------------------	--------------------

Notes:

1. The answer to each question must be written on the separate answer sheet.
2. There is only one correct answer for each question.

【 Subjects of the examination and examination period 】

Type of License Held	Subject(s) to be Taken	Examination Period
None	Common Part and Advanced Part (Qs 1 through 64)	140 minutes (two hours and 20 minutes)
①Second Class (One Nautical Mile Limitation) ②Personal Water Craft	Steering and Sailing Rules Operation Advanced Part (Qs 13 through 64)	125 minutes (two hours and 5 minutes)
Second Class	Advanced Part (Qs 51 through 64)	70 minutes (one hour and 10 minutes)

Note: For scoring and passing standards, please refer to the leaflet (First or Second Class).

[Advanced Operation I]

Q51 A navigation plan has been created as described below. When a vessel departs from point A at 10:00 and navigates through the entire course at 10 knots, at what time will it arrive at point D? Choose the correct answer from the following. Note that no effects of winds, tidal streams, and ocean currents are assumed. (Use nautical chart W150 for examination.)

Departing point A Start from a point in a sea area northwest of Ushijima Island, with Midorisaki Lighthouse at the north end of Ushijima Island sighted at a magnetic bearing of 070° and Heisaki Lighthouse at the east end of Oshima Island sighted at a magnetic bearing of 300° , and navigate on a magnetic course of 355° .

First course alteration point B Alter the magnetic course to 312° at a point where Kimisaki Lighthouse at the north end of Oshima Island is sighted abeam on the port side.

Second course alteration point C Alter course at a point where Hamasaki Lighthouse (Fl. 20s) south of Nagahama Town is sighted abeam on the starboard side.

Arrival point D Sea area south of Daito Port, $30^\circ -20.2'N$, $134^\circ -55.4'E$

- (1) Approximately 13:42
- (2) Approximately 14:02
- (3) Approximately 14:22
- (4) Approximately 14:42

Q52 Vessel G, which is navigating in a sea area north of Akishima Island on a compass course of 297° (deviation is $6^\circ E$), locates Matsusaki Lighthouse south of Kawaguchi City at a bearing of 087° and a distance of 8 nautical miles by radar. Which of the following corresponds to vessel G's position in latitude and longitude? Note that the radar indicates a relative bearing. (Use nautical chart W200 for examination.)

- (1) $40^\circ -28.6'N$, $139^\circ -58.2'E$
- (2) $40^\circ -22.3'N$, $140^\circ -03.3'E$
- (3) $40^\circ -21.8'N$, $140^\circ -04.5'E$
- (4) $40^\circ -21.3'N$, $140^\circ -06.6'E$

Q53 Vessel J, navigating at a speed of 10 knots in a sea area northeast of Nishikawa City, reaches a point where Akamisaki Lighthouse east of Nishikawa City is sighted at a magnetic bearing of 244° and Aosaki Lighthouse east of Natsu Town is sighted at a magnetic bearing of 331° . In order to pass from this point at the closest distance of approach of 3.0 nautical miles with Kimisaki Lighthouse at the north end of Oshima Island on its starboard side, which of the following magnetic courses should the vessel take? Choose the correct answer from the following. It is assumed that there is an ocean current of 3 knots flowing in the direction of 070° (true bearing) in this sea area.

(Use nautical chart W150 for examination.)

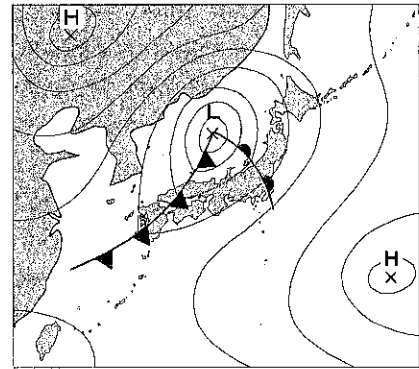

- (1) 098°
- (2) 109°
- (3) 115°
- (4) 124°

Q54 When creating a navigation plan, which coastal facilities along the planned course should be selected as emergency contacts? From the combinations of ① to ⑤, choose the appropriate one.

- ① Local Marine Accident Tribunal
- ② Marina
- ③ Fisheries cooperative association
- ④ Japan Coast Guard office
- ⑤ Lighthouse

- (1) ① and ③
- (2) ②, ③, and ④
- (3) ①, ②, ④, and ⑤
- (4) All are appropriate.

Q55 The figure at the right shows a surface weather chart illustrating the weather conditions around Japan on a certain day. Which of the following is appropriate as the combination of terms that fit in the blanks in the statement below concerning these weather conditions?

"If this pressure pattern appears from winter to spring, a low pressure system that develops in the East China Sea moves toward northeast in the Japan Sea while rapidly growing stronger. A warm (A) wind blows toward the low pressure system, and the foehn phenomenon causes a hot, dry strong wind to blow on the (B) side, which may lead to fires and snowslides. After the low pressure system passes, a (C) seasonal wind blows from the opposite direction, possibly resulting in a drop in temperature and a strong snowstorm."

- (1) (A): northerly (B): Pacific (C): northwesterly
- (2) (A): southerly (B): Pacific (C): southwesterly
- (3) (A): northerly (B): Japan Sea (C): southwesterly
- (4) (A): southerly (B): Japan Sea (C): northwesterly

Q56 Of the following statements concerning the tidal currents in the Kurushima Channel (Naka Channel) on August 23, which one is correct? According to the tide table, the tidal currents in the Kurushima Channel on this day are as shown in the table at the right, where + indicates a southerly current and - indicates a northerly current.

August				
転流時 Slack		最強 Maximum		
		h	m	kn
23	01 00	04	06	- 8.1
	07 07	10	06	+ 8.7
	13 10	16	23	- 8.5
	19 29	22	26	+ 8.5

- (1) The southerly current becomes strongest at 22:26.
- (2) In the morning, the southerly current flows from 04:06 to 10:06.
- (3) The change from the northerly current to the southerly current occurs at 07:07 and 19:29.
- (4) The northerly current becomes strongest at 10:06.

Q57 Of the following statements that describe the relationship between the change in the wind direction that occurs as a typhoon approaches and the position of the own vessel, which one is inappropriate?

- (1) When the own vessel is positioned on the path of a typhoon, the wind direction remains almost the same.
- (2) When the own vessel is positioned to the right of the path of a typhoon, the wind direction changes to clockwise.
- (3) When a typhoon passes on the east side of the own vessel, the wind direction changes to counterclockwise.
- (4) The center of a typhoon is in the direction of 20° to 30° from abaft the starboard-side beam when the own vessel receives the wind from behind.

Q58 Of the facts mentioned below that concern the following marine accident, which one is the most serious cause of it?

"The skipper of pleasure boat A once experienced an incident where the anchor got stuck on the sea floor and could not be hoisted. So he tailored the anchor such that, if it got stuck, he would be able to get it off the sea floor easily by moving the boat forward with the engine and pulling the anchor rope strongly, causing the anchor to turn over.

One day, the skipper goes fishing with 2 passengers on board. Arriving at the fishing point, he stops the engine and casts anchor at a place where the water depth is 10 meters. After extending the anchor rope by approximately 30 meters, the skipper puts the boat at anchor by tying the rope to the ring located in the central part of the starboard side of the boat, slightly closer to the bow, and the men start fishing. After a while, they decide to return to port as the catch becomes poor. When the skipper pulls the anchor rope to hoist the anchor, he cannot hoist it because it is stuck in the sea floor. So he decides to hoist the anchor by using the propulsion power of the engine. The skipper makes sudden acceleration by quickly turning the throttle lever of the outboard engine all the way, with the anchor rope tied to the ring on the starboard side. But the anchor stuck in the sea floor does not come off as expected. What is even worse, the tense anchor rope causes the hull to tilt to the starboard side, and the boat loses stability and capsizes."

- (1) The skipper tailors the anchor to make it easy to hoist it when it is stuck in the sea floor.
- (2) The place where the skipper ties the anchor rope and the way he operates the engine when hoisting the anchor are inappropriate.
- (3) The length of the anchor rope is inappropriate for the water depth.
- (4) The skipper moves the boat forward with the engine when hoisting the anchor.

[Advanced Operation II]

Q59 Suppose that you will travel from port A to port B that is 36 nautical miles away. You will navigate at 6 knots within 3 nautical miles of the entrance of either port and at 15 knots in the rest of the course. If your vessel consumes 1 liter of fuel per hour when navigating at 6 knots and 17 liters of fuel per hour when navigating at 15 knots, how much fuel will be needed for this trip? Choose the correct answer from the following. Note that 20% more fuel should be added as reserve fuel.

- (1) 18 liters (2) 35 liters (3) 42 liters (4) 70 liters

Q60 Of the following descriptions about how to maintain the quality of engine oil, which one is inappropriate?

- (1) To keep the temperature of engine oil high
- (2) To replace engine oil at intervals recommended by the manufacturer
- (3) To replace the oil filter at regular intervals
- (4) To prevent fuel oil, water, and dirt from getting mixed

Q61 Of the following statements that describe the cooling water system of a vessel with an inboard engine, which one is inappropriate?

- (1) The impeller of the cooling sea water pump is driven by the power of the crank shaft that is transmitted by the V belt.
- (2) If the amount of discharged cooling sea water is small or the alarm lamp comes on, the impeller may be damaged.
- (3) Regardless of whether the engine is of the indirect cooling type or direct cooling type, anticorrosive zinc is provided on the cooling sea water path.
- (4) Regardless of whether the engine is of the indirect cooling type or direct cooling type, a thermostat is provided on the cooling sea water path.

Q62 Of the following statements that describe the power transmission system of a vessel with an inboard engine, which one is appropriate?

- (1) The bolted anticorrosive zinc covering the propeller shaft should be painted to prevent corrosion.
- (2) While the vessel is underway, the gland packing of the stern tube should be tightened firmly to prevent water leakage.
- (3) The gland packing should be tightened with nuts or double nuts that do not come loose in the presence of vibration.
- (4) For the propeller mounting nuts, screws should be used that tighten when turned in the same direction that the propeller rotates when the vessel moves forward.

Q63 Which of the following is inappropriate as the reason why a gasoline engine cannot generate a high enough output?

- (1) The fuel filter is clogged with litter.
- (2) The shift cable is stretched from long hours of use.
- (3) The concentration of the mixed gas of the carburetor is not appropriate.
- (4) The engine room is not well ventilated, precluding the intake of a sufficient amount of air.

Q64 Which of the following is cannot be deemed to be the reason why the engine rotation speed becomes unstable and abnormal vibration occurs while a gasoline engine is running idle?

- (1) Water or air is trapped in the fuel.
- (2) The ignition plug is dirty.
- (3) There is one or more cylinders that are not operating.
- (4) The clutch is slipping.
